## Positive voltage regulators

### ■ Description

The U 0512 series of three terminal positive regulators employ internal current limiting and thermal shutdown, making them essentially indestructible. If adequate heat-sink is provided, they can deliver up to 100 mA output current. They are intended as fixed voltage regulators in a wide range of applications including local or on-card regulation for elimination of noise and distribution problems associated with single-point regulation. In addition, they can be used with power pass elements to make high-current voltage regulators. The U0512 series used as Zener diode/ resistor combination replacement, offers improvement along with lower quiescent current and lower noise.

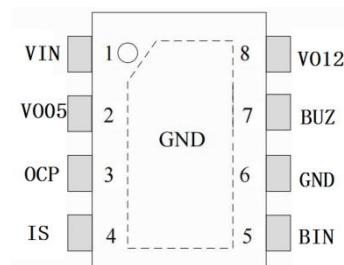

### ■ Typical application

- Twist the car controller
- Balancing car controller
- Power tool
- Electric vehicle controller
- Six Sound card and computer motherboard

### ■ Features

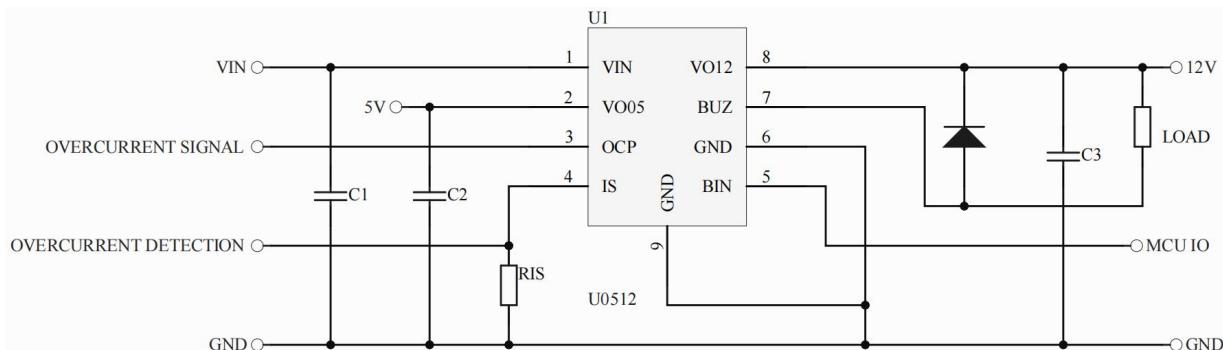

- Maximum Output Current IO:0.1 A
- Output Voltage VO : 5V /12V
- Continuous Total Dissipation PD:0.6 W (Ta= 25°C )

### ■ Packages

ESOP8

### ■ Application Circuit

\* Bypass capacitors are recommended for optimum stability and transient response and should be located as close as possible to the regulators.
